

Vena for NetSuite

Bring the cloud down to earth - break down data silos by seamlessly integrating NetSuite with Vena. Our direct integration with NetSuite allows you to get timely access to your data in Vena so you can spend less time manually manipulating data and more time telling the story behind your numbers.

KEY FEATURES

- **Gain confidence in your numbers.** Accelerate time-consuming data integration tasks and gain data integrity by eliminating errors that often occur with manual data manipulation.
- **Get back lost time.** Our fast and secure web-based interface that allows you to automatically load your data into Vena with ease.

- **Stay in the know.** Alerts and notifications on the status and progress of data loads into Vena mean you won't have to guess if an integration was a success.
- **Say goodbye to rigidity and hello to flexibility.** You can tailor the NetSuite and Vena integration to synchronize relevant relationships, data and hierarchies.

HOW DOES IT WORK?

Setting up your NetSuite connection is a quick and easy cloud-based process. Your NetSuite connection and your custom saved searches can be brought into Vena in two easy steps:

- Log into your NetSuite instance on the Vena interface and enter credentials into Vena.
- Download the SuiteBundle which allows users to have a starting point when creating your saved searches.

HOW VENA PARTNERS WITH YOU

Vena works with your team to configure your data integration, validate your data and provide best practices throughout the process.

We will work with your team to:

- Review Vena and NetSuite integration requirements
- Configure the Vena NetSuite connector
- Load data into Vena
- Guide you through best practices to validate source data

We will need your team to:

- Provide a resource with knowledge and understanding of NetSuite who can identify objects and tables required for integration and provide queries to bring over the required data, including creating and maintaining saved searches
- Provide necessary NetSuite access and permissions
- Validate completeness and integrity of the data
- Provide one time non-transactional historical data into csv

STANDARD INTEGRATION FIELDS AND OBJECTS

Although many forms of data can be integrated into Vena, we provide a stock saved search in order to get you started. The most common type of data brought into Vena is financial transactional data.

The standard saved search will include the following objects. This saved search can be customized as needed.

Vena Transactions Search		
Account : Description	Account : Number	Account Type
Amount	Amount (Foreign Currency)	Currency
Date	Department	Department : Internal ID
Document Number	Exchange Rate	Invoice Number
Item	Line ID	Line Unique Key
Memo	Name	Period
Subsidiary	Subsidiary: Name (no hierarchy)	Subsidiary: Currency
Type	Vendor: Name	

ADDITIONAL DETAILS

- Vena's NetSuite integration will require read permissions provided by the client, in order for Vena to have access to all required financial data.
- Integration will require administrators to ensure that the appropriate fields are being integrated into Vena.
- Transformations to the incoming NetSuite data will be handled in Vena (i.e. aggregation, normalization and simple mappings).
